Step 1. Assemble the poles. Colored poles should go on the end of the silver poles.

Step 2. Insert both pole tips into the webbing grommet holes on the opposite corners – X frame design (see picture).

Step 3. Attach the tent top center two snap clips, facing in opposite directions, onto the top pole while ensuring the lower pole passes in between the two plastic clips and held up by the horizontal black webbing.

Step 4. Attach the remainder of the tent pole clips onto poles without twisting the black webbing.

Step 5. Add rain fly with care that door entrances match those of the tent. Attach Velcro on inside of the fly around the poles for added stabilization.

Step 6: Stake out the 4 corners of tent. Additional stakes provided to stake vestibules and sides of tent.
